

CHT × PayForward — Technical Prep

INTERNAL · MON SEP 21 · 4:00 PM
CST

Read the room: Vijay is ex-Green Dot & Hulu — a card-rails + recommendation-engine thinker. Frame HealthBenefits.Shop as the recommendation layer on the catalog.

PayForward member app — HealthBenefits.Shop experience embedded

↑ recommendations into the app · no PHI

HealthBenefits.Shop · Intelligence Layer

canonical taxonomy (GTIN · NDC) · condition → product · ranking & discovery · personalization, no PHI

↑ catalogs normalized into one taxonomy — swap fulfillment partners freely

FULFILLMENT MIX

Medline

Cardinal

Retail

PAYFORWARD KEEPS

- Benefit card
- FIS payment rail
- Purse & balance logic
- Plan relationship
- Compliance & settlement

We never touch these.

HOW WE FIT — IN BRIEF

Fulfillment-agnostic. We normalize any partner's catalog (Medline, Cardinal, retail) into one taxonomy on GTIN/UPC + NDC/UDI, tagged for condition & eligibility.

Embed, don't replace. Recommendations + discovery into your app via API or SDK — you keep the card, FIS rail, purse/balance, plan relationship.

Above adjudication. SKU-level pre-filter on top of the category-level APL; FIS point-of-sale stays the source of truth (and audit posture improves).

No PHI. Personalization on a pseudonymous token — no health data, no cookies.

Routing unchanged. Member selects; PayForward settles and ships via its existing distributor.

QUESTIONS FOR VIJAY

- How do you expose member session + benefit balance to an embedded experience — OAuth/SSO, API?

Where does the approved product list live, how often updated — can we consume it? (All FIS-side?)

What's the Medline / Cardinal product feed like — structured SKU data with identifiers?

Embed preference: our SDK/iframe, or a headless recommendation API you render in-app?

How do you want personalization signal handled so neither side touches PHI?

FIS adjudicates by category — appetite for an SKU-level pre-filter upstream?

Reminder: this is our working hypothesis, not PayForward's confirmed architecture. Graze the tech fit Monday; reserve the depth for a technical working session.
